

TO Water Polluti

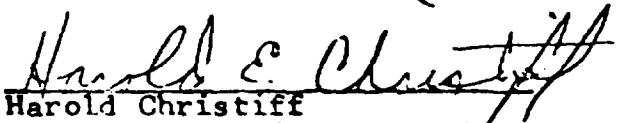

FROM Harold Christiff

DATE April 24, 1970

SUBJECT National Gypsum Company, Division Avenue, Millington, New Jersey

37254

On April 21, 1970, I had the opportunity to observe a possible water pollution violation of the Passaic River by the above company. There are several drainage lagoons at the rear of this plant located near the intersection of Stone House Road and River Road approximately 200 feet Northwest of this intersection. These lagoons are filled to capacity with asbestos, acrylic paint and cement and now being routed into the Passaic River. The water temperature being discharged into the Passaic River is approximately 100° - 115°F.
